Coby Lam, Zikai Hao, Pengfei Li

Problem 1: Mobile Ordering Food on Campus

A mobile online system which allow people on campus to order food ahead of time

Streamlines food orders during peak hours and reduces congestion

Without enough time between courses, students go hungry

Problem 2: Exchanging Used Textbooks

Used textbooks exchange options are scattered across many systems and the databases are not always accessible to students.

Students will benefit as a **centralized exchange of used textbooks** will save them money and build connections.
